# Public consultation for the EU climate ambition for 20 certain climate and energy policies of the European G

Fields marked with \* are mandatory.

#### PART I

<

- 1 Overall climate ambition for 2030, opportunities and challenges
- 1.1 2030 greenhouse gas emission reduction target for the EU

The EU has set itself a target to reduce greenhouse gas emissions domestically by at significant stepping up of annual reductions compared to the reductions achieved over implementation of energy efficiency and renewable energy legislation as agreed on the lead to around 45% greenhouse gas emission reductions by 2030.

With the recently agreed EU objective of achieving climate neutrality by 2050 and with zero pollution increasingly recognised as urgent, what should be the EU's 2030 target

- It should remain unchanged with a target to reduce greenhouse gas emissions in levels.
- It should be increased to at least 50%.
- It should be increased to at least 55%

EUSurvey Survey Page 2 of 4

# 1.2 Opportunities and challenges associated with an increased level

Which of the **opportunities** in the list below would you consider as most relevant for the by 2030.

- Multiple options are possible.
  - ☑ It will be a chance to do our part in saving the planet and thus fulfilling our duty to
  - ☑ It will allow a more gradual pathway to reaching a climate neutral EU by 2050
  - ✓ It will help mitigate costs associated with climate change to the society (from e.ç of ecosystems etc.)
  - ☑ It will ensure a growing EU economy based on new production and consumption
  - ✓ It will reinforce EU leadership and inspire action to battle climate change globally
  - ✓ It will create new (green) jobs, including those that are difficult to outsource outsi energy installations, construction)
  - ☑ It will lower pollution, improve health, make cities and buildings more liveable an
  - ✓ It will give the EU industry a first-mover advantage on global markets
  - ☑ It will improve energy security and reduce the EU dependency on imported fossi
  - ☐ Other (please specify in answer box)

Which of the **challenges** in the list below would you consider as most relevant for the 2030.

- Multiple options are possible
  - ☑ It will represent a significant investment challenge for EU industry, services, tran investments are likely to be passed on to consumers via higher prices or taxes
  - ✓ It will likely lead to a structural shift and changing skill requirements in the econo sectors and jobs linked to fossil fuels extraction and carbon-intensive manufactu
  - ☐ It will change the existing policy and will confront us with reduced lead-time for d measures and for the economic actors to adjust.
  - ✓ The simultaneous transition to climate neutral, circular and digital economy and reallocation across sectors, occupations and regions. Businesses, especially SN ensuring sufficient workforce
  - ☑ It may lead to societal inequalities due to an initially higher cost of green product renewable energy, which may negatively impact the lower income people/region
  - ☐ Even with a more ambitious 2030 target, it is difficult to ensure sufficient action to ground
  - ☑ The EU, if acting alone, will lose out in terms of international competitiveness
  - ☐ Other (please specify in answer box)

<

# 1.3 Balance of opportunities and challenges

EUSurvey Survey Page 3 of 4

For the opportunities and challenges you indicated in the above questions, do you conside the challenges in your daily life (individuals responding) or sector of activity (organisation

Waste management	0	0	0	0	0	0	0	0

#### 2.2 Energy system

Energy production and consumption remain largely based on fossil fuels and represer emissions. To achieve climate neutrality by 2050, this will need to change profoundly.

In your opinion, if the EU is to achieve a higher 2030 greenhouse gas emission reduct the necessary energy transition by 2030?

- Multiple options are possible.
  - ✓ Higher energy efficiency
  - ✓ Higher penetration of renewable energy
  - ☐ Use of nuclear energy for power generation
  - Electrification of final energy use
  - ✓ Phase-out of solid fossil fuels
  - ✓ More limited role of natural gas
  - ☑ Better sector coupling between gas and electricity sectors
  - ✓ Use of carbon capture and use technologies
  - ☑ Use of carbon-neutral energy carriers such as green/blue hydrogen, bio-methan
  - ☑ Reduced need for energy thanks to life-style changes (e.g. using active modes c
  - ☐ Do not know/Do not have an opinion

# 2.3 Renewable energy ambition

<

In the existing legislation, the EU level target is to have at least 32% share of renewal. 2030. The costs of renewable energy technologies have significantly declined over the

In your view, what would be the required EU ambition for renewable energy in 2030 to emission reduction target (that you indicated in question **1.1**) and to the EU long-term 2050?

Achieve at least a share of 32% renewable energy in the final energy consumption the level already agreed

EUSurvey Survey Page 3 of 9

<ul> <li>Achieve at least a share of 35% renewable energy in the final energy consumpti</li> </ul>
○ Achieve at least a share of 40% renewable energy in the final energy consumpti
$\bigcirc$ Achieve even higher level of ambition than at least a share of 40% renewable er
EU by 2030

#### Do not know/Do not have an opinion

#### 2.4 Energy Efficiency ambition

In the existing legislation, the EU level target is to have at least 32.5% energy efficient consumption and the EU is committed to the "energy efficiency first" principle[2].

[1] Compared to 2007 Baseline.

[2] 'Energy efficiency first' means taking utmost account in energy planning, and in policy and investment decisions, of alternative and energy supply more efficient, in particular by means of cost-effective end-use energy savings, demand response initiatives a whilst still achieving the objectives of those decisions (Regulation (EU) 2018/1999).

In your view, what would be the required EU ambition for energy efficiency in 2030 to emission reduction target (that you indicated in question **1.1**) and to the EU long-term 2050?

- Achieve at least 32.5% energy efficiency (in both primary and final energy constlevel already agreed
- Achieve at least 35% energy efficiency (in both primary and final energy consum
- Achieve at least 40% energy efficiency (in both primary and final energy consur
- Achieve even higher level of ambition than at least 40% energy efficiency (in bot by 2030
- Do not know/Do not have an opinion

#### 2.5 Role of fossil fuels

#### 2.5.1 Solid fossil fuels

Solid fossil fuels, such as coal, lignite, peat and oil shale (herein referred to as "solid for development of our economies since the industrial revolution. At the same time, these other polluting emissions. Their use without abating their emissions is thus not comparable objective.

In vour opinion, how can this be addressed in addition to the existing legislation and g

☐ Regulate on the national level, by imposing a phase out of solid fossil fuels in he

☐ Clearly indicate to consumers that the use of solid fossil fuels in heating is not so

☑ Give a stronger price signal on EU and national level for fuel switch away from s taxation or emission trading)

✓ Phase out of any public support to solid fossil fuel related investments and use.

☐ Promote clean technologies (such as carbon capture and storage/utilisation), when consumption of solid fossil fuels

☐ Promote carbon-neutral power generation and electrification of the final demand and electric heat pumps and vehicles)

□ Do not know/Do not have an opinion

# 2.5.2 Natural gas

In your view, can natural gas and other gases help the EU energy system decarbonise greenhouse gas reduction target with a view to achieving the EU long-term objective to

- Yes, natural gas can help the EU reach the 2030 targets as it is a more climate f transport and power generation and it is a source of flexibility for an increasingly
- Natural gas may have a role as a transition fuel but, at the latest after 2030, it sh neutral alternatives, such as biogas, bio-methane, green hydrogen and e-gas
- Natural gas is a fossil fuel, its continued use will make it harder to meet the 2030 longer term; a focus on energy efficiency and electrification will help reduce dem
- Do not know/Do not have an opinion

# 2.6 Buildings

<

Buildings today are responsible for 40% of the final energy consumption, inc also emit 13% of the total greenhouse gas emissions in the EU (34% if include power & district heating generation). Buildings can be decarbonised and their through a number of solutions.

# 2.6.1 Residential buildings - solutions for home owners

EUSurvey Survey Page 5 of 9

For residential buildings, please rate the options below to indicate what you would conclimate neutral homes for home owners.

• Rating from 5 (very relevant) to 1 (little relevant). Not all options need to be rated.

Replace the current heating & cooling system by a more efficient one (e.g. replace heat pump)

Replace old or inefficient heating equipment using bioenergy, solid or liquid fossi

Use renewable energy on-site (e.g. biomass, solar thermal, PV panels, geothern through district heating/cooling networks

Improve the thermal properties of the building's envelope through better insulation

Use smart technologies (e.g. building automation and control systems, room tem smart meters)

Use more energy efficient appliances

#### 2.6.2 Non-residential buildings - solutions for building owners

For non-residential buildings such as offices, shops, hospitals, schools, please rate the consider as most relevant solutions towards climate neutral buildings for building owner Rating from 5 (very relevant) to 1 (little relevant). Not all options need to be rated.

Use of building automation and control systems and smart building technologies

Improve the thermal properties of the building's envelope through better insulation

Introduce more energy efficient heating & cooling systems

Use renewable energy on-site (e.g. biomass, solar thermal, PV panels, geothern through district heating/cooling networks

Apply energy management systems

# 2.7 Industry

Industry is responsible for 25% of the final energy consumption and for about 20% of the Significantly reducing their emissions in order to contribute to climate neutrality by 205 particular challenge, and will require technologies to be tested and deployed at scale to

EUSurvey Survey Page 6 of 9

the investment cycles in industry.

Please rate the items in the table below to indicate the importance of the technologies greenhouse gas emissions in industrial installations, in the 2030 time horizon.

• Rating from 5 (very relevant) to 1 (little relevant). Not all options need to be rated.

Higher energy efficiency of industrial processes

Electrification of industrial processes

Use of hydrogen in industrial applications as e.g. fuel, feedstock or reducing age

Use of e-fuels in industrial applications

Use of sustainable biomass as a feedstock (e.g. in the chemicals industry)

Use of sustainable biomass as a fuel

Use of carbon capture and storage or carbon capture and use

Developing a more circular economy where products and materials are more redeveloping new business concepts

Substitution of emissions intensive products by alternative products produced will greenhouse gas emissions

# 2.8 Mobility: road transport

<

Please note, the Commission will also launch a relevant public consultation for the Str

Road transport is responsible for around 70% of the EU greenhouse gas emissions in emissions. Therefore, it plays an important role in the transition towards a climate neu the 2030 greenhouse gas emission reduction target. The EU has a number of policies taxation and targets for 2025 and 2030 to reduce  $CO_2$  emissions of new cars, vans an

In view of climate and environmental challenges, please rate how important it is for EL

Rating from 5 (very important) to 1 (little important). Not all options need to be rated.

Increasing the share of more sustainable transport modes (e.g. supporting multir transport mode such as walking and cycling)

EUSurvey Survey Page 7 of 9

Improving the efficiency of the whole transport system (e.g. through better traffic systems) Increasing the uptake of clean vehicles such as electric and hydrogen-fuelled vel emission standards) and ensuring their efficient integration into the energy grid Increase the uptake of sustainable alternative fuels (e.g. developing recharging/r infrastructure, blending mandates) Incentivising sustainable consumer choices and low-emission mobility practices application of the 'polluter-pays' and 'user-pays' principles, better consumer infor carbon footprint) Increasing investment in sustainable transport infrastructure and solutions (e.g. h inland waterways, recharging and refuelling infrastructure) Fostering the deployment of innovative digital solutions in transport Improving affordability and accessibility of sustainable transport In your view, what are the main barriers for market uptake of zero-emission vehicles? Multiple options possible ✓ Purchase price of low and zero-emission vehicles Availability of recharging/refuelling infrastructure ✓ Availability of vehicles models Insufficient range capacity ☐ Tax treatment of low and zero-emission vehicles ☐ Other 2.9 Agriculture, Forestry and Land Use Land use can contribute to reducing greenhouse gas emissions by substituting carbor and by increasing absorption of CO<sub>2</sub> in soil carbon and biomass. On the other hand, a greenhouse gas emissions, and wood harvesting and agriculture practices release CC

In your opinion, which of the solutions listed below play the most important role to reduce CO<sub>2</sub> removals in the land use sectors?

Multiple options are possible.

<

- ☑ Afforestation to increase forest cover in Europe
- ☑ Sustainable forest management, restoration and preservation of forests to ensur

# Public consultation for the EU climate ambition for 20 certain climate and energy policies of the European G

Fields marked with \* are mandatory.

#### **PART II (for experts)**

5 Climate and energy policy design

The main climate legislation concerned with an ambition increase is:

- the Emissions Trading System Directive (EU ETS) that regulates large
- the Effort Sharing Regulation (ESR), which distributes between Membe reduction efforts in other sectors of the economy such as transport, buil waste;
- the Land Use, Land Use Change and Forestry Regulation (LULUCF) th absorptions from the natural carbon dioxide sink (soil carbon and bioma
- the CO<sub>2</sub> Emissions Performance Standards for Cars and Vans.

The main energy legislation concerned with a potential ambition increase is and the Energy Efficiency Directive (EED).

Deeper GHG emission cuts by 2030 should also be supported by an appropriate policies in other fields, such as mobility, agriculture, energy taxation etc.

EUSurvey Survey Page 2 of 14

# 5.1 Role of the different climate policy instruments

The present climate legislation envisages that the sectors covered by the EU Emission 2030 with 43% compared to 2005. For the sectors covered the Effort Sharing Regulation of 30% by 2030 compared to 2005. For the land use sink under the Land Us the objective is to ensure that the EU carbon sink at least performs as well by 2030 as practices.

Of these three key pieces of climate legislation which ones would require a substantia to achieve greenhouse gas emissions reduction in the range of 50% to 55% by 2030 c the table below:

**?** Rating from 5 (in need of a significant ambition increase) to 1 (not important, no increase legislation).

	1	2	3	4	5
EU Emission Trading System	0	0	0	0	•
Effort Sharing Regulation	0	0	•	0	0
Land Use, Land Use Change and Forestry Regulation	0	0	0	0	0

# 5.2 EU Emissions Trading System (EU ETS)

In the existing legal framework for 2021 - 2030, the amount of greenhouse gas emissiby 2.2% per year during the 2021 - 2030 period. However, to achieve higher ambition, other actions can be contemplated that impact the carbon pricing signal.

The EU ETS ambition can be strengthened through different policy options. How could order to effectively contribute to an emission reduction of 50 to 55% by 2030?

**13** Multiple options are possible.

<

- ✓ Increase the linear reduction factor and as such reduce faster the amount of allo
- ☐ Increase the linear reduction factor as well as lower the starting point on which the shifting the total allocation downwards)
- ✓ Introduce a pricing policy (e.g. minimum price floor)
- Reduce or eliminate the share of free allocation
- ✓ Strengthen the Market Stability Reserve rules (e.g. update feed rates) but allow increase greenhouse gas reduction ambition

EUSurvey Survey Page 3 of 14

# 5.2.1 Addressing carbon leakage risk for energy intensive industry

Increased ambition will make the overall ETS allowance budget (the cap) lower, affect and free allocation of allowances. Auctioning is the default method for allocating allow the carbon leakage risk for energy intensive sectors covered by the EU ETS. Should c persist, as the EU increases its climate ambition, the Commission undertook in the Eu propose a Carbon Border Adjustment mechanism for selected sectors to reduce the ri designed to comply with World Trade Organization rules and other international obliga

If targets are increased to match an overall economy wide ambition of 50% to 55% greating 1990, and if free allocation to industry is maintained as a tool to address carbon leakage changed?

- O The share of free allocation for industry in the ETS cap is allowed to increase
- The share of free allocation for industry in the ETS cap should remain at the pres
- The share of free allocation for industry in the ETS should decline
- On't know/Don't have an opinion

#### 5.3 EU emissions trading extension to road transport and buildings

# 5.3.1 The role of carbon pricing

How do you see the role of carbon pricing to reduce emissions in the buildings and roa

- Should be complementary to other sector specific policies, including taxes, dutie
- Should replace other sector-specific measures
- Is not suitable/feasible and other measures should drive emission reductions ins
- Don't know/Don't have an opinion

# 5.3.2 How to introduce carbon pricing

If the EU introduced a carbon price in buildings or the road transport sector, which opt

- Proposing a CO<sub>2</sub> tax for these sectors
- Include these sectors in an emission trading system and apply auctioning
- Don't know/Don't have an opinion

#### 5.3.3 Interlinkage with Effort Sharing Regulation

EUSurvey Survey Page 4 of 14

EUSurvey Survey Page 5 of 14

Electric vehicles and fossil fuelled vehicles face the same carbon price incentive

Generates revenues which can be used to facilitate transition and compensate lc households

Helps EU to achieve its climate and environmental objectives

# 5.3.6 Extension of EU emissions trading - challenges

What do you see as **challenges** related to the extension of EU emissions trading to see Please rate the below challenges to indicate which play the most important role:

Rating from 5 (very important) to 1 (little important). Not all options need to be rated.

The required level of carbon price signal needed for buildings and road transport emissions

The resulting impact on the EU ETS price

Administrative complexity and implementation of robust monitoring, reporting and system

Overlap with existing pricing measures (in particular taxation) in these sectors

Social acceptability with a view to a just transition

Political acceptability of introducing a carbon price in these sectors

# 5.3.7 How to introduce carbon pricing in the maritime transport secto

If the EU would introduce a carbon price in the maritime transport sector, it should do:

- Proposing a fuel levy for the sector, creating certainty about the carbon pricing ir environmental outcome
- Include the sectors in the EU ETS and apply auctioning, creating certainty about reduction outcome for all sectors included in the EU ETS
- Don't know/Don't have an opinion

<

# 5.3.8 EU ETS and the maritime transport sector - key aspects to con-

EUSurvey Survey Page 6 of 14

What are the most important aspects to consider in extending the EU ETS to make the most important aspects to consider in extending the EU ETS to make the most important aspects to consider in extending the EU ETS to make the most important aspects to consider in extending the EU ETS to make the most important aspects to consider in extending the EU ETS to make the most important aspects to consider in extending the EU ETS to make the most important aspects to consider in extending the EU ETS to make the most important aspects to consider in extending the EU ETS to make the most important aspects to consider in extending the EU ETS to make the most important aspects to consider in extending the EU ETS to make the most important aspects to consider in extending the EU ETS to make the most important aspects to consider in extending the EU ETS to make the most important aspects to consider in extending the EU ETS to make the most important aspects to consider in the extending the extending the EU ETS to make the extending the	aritime

If national emission reduction targets under the Effort Sharing Regulation are in	crease
which should be adapted?	
Multiple options are possible.	
☐ No, the current design of the Regulation is fit for purpose	
Give cost efficiency more weight in the methodology with which the increa	ases in
$\ \square$ Adapt the limits of the flexibilities related to banking, borrowing and transfe	ers
☐ Increase the possibility to use LULUCF credits	
$\ \square$ Increase or widen access to the flexibility with the EU ETS	
☐ Don't know/Don't have an opinion	
	>

EUSurvey Survey Page 7 of 14

# 5.5 Role of the Regulation on Land Use, Land Use Change and Fore

How could the LULUCF sector further contribute to increased climate ambition by 203 Please rate the options in the list below:

• Rating from 5 (very relevant) to 1 (little relevant). Not all options need to be rated.

Make LULUCF accounting rules more stringent, so more effort is required to gen credits

Increase the ambition of LULUCF removals across the whole sector

Increase the existing flexibility in how LULUCF credits are used towards climate trade flexibility options within LULUCF; higher flexibility with the Effort Sharing Reoff-setting of agricultural emissions)

Develop an EU methodology to certify carbon dioxide removal credits at the leve foresters for different types of carbon dioxide removals in forestry and agriculture afforestation, protecting and restoring wetlands, increasing soil carbon content or long-lived wood products

Don't know/Don't have an opinion

# 5.6 Role of energy policies

The European Green Deal makes it clear that in case of a higher climate ambition the propose to revise, where necessary, the relevant legislation by June 2021.

What are your views on which legislative instruments in the energy field should be rev ambition for 2030.

- Multiple options are possible.
  - ☐ Energy Efficiency Directive
  - ☐ Renewable Energy Directive
  - $\hfill \square$  Regulation on the Governance of the Energy Union and Climate Action
  - ✓ Internal energy market legislation
  - Other

<

✓ No revision needed

# 5.6.1 Renewable energy policies

EUSurvey Survey Page 8 of 14

In case of higher ambition (than 32%) for renewable energy, please rate potential action list below:

• Rating from 5 (very relevant) to 1 (little relevant). Not all options need to be rated.

Stronger enforcement of the existing legislation

Additional technical and financial support in implementation of the existing legisla

Additional measures to incentivise a more Europe-wide approach for renewable (e.g. cross-border projects for renewable electricity production)

Additional measures to increase decentralised renewable energy production (e.g energy communities)

Additional measures to increase renewable electricity production, including deve necessary infrastructure

Additional measures to increase renewable heat and cold production (both in bui industry)

Additional measures to increase renewable energy consumption in industry

Additional measures to increase renewable energy consumption in buildings

Additional measures to increase renewable energy consumption in transport

Additional measures to ensure that biomass use remains sustainable

Additional measures to support innovation related to renewable energy productic

# 5.6.2 Energy efficiency policies

<

In case of a higher ambition (than 32.5%) for energy efficiency, please rate potential a the list below:

② Rating from 5 (very relevant) to 1 (little relevant). Not all options need to be rated.

Stronger enforcement of the existing legislation

Additional technical and financial support in implementation of the existing legisla

Making the "Energy Efficiency First" principle a compulsory test in relevant legisland planning decisions

More stringent energy performance standards for products

EUSurvey Survey Page 9 of 14

More stringent energy performance requirements for buildings

More stringent energy performance requirements for industrial processes, includ process integration and waste heat reuse

More stringent energy performance requirements for transport vehicles

New requirements for agriculture sector and promoting electrification of machine

Standards for ICT sector to promote energy efficiency and reuse of waste heat (edecisions on location and design of data centres)

#### 5.6.3 Renovations

<

Renovation is a key tool to reduce greenhouse gas emissions from buildings, promote energy performance.

In your view, how building renovation could be best incentivised?

<b>9</b> Mı	ultiple options are possible.
	Removing administrative barriers preventing energy efficiency and renewable sc
	Raising awareness and communicating better the wider benefits of sustainable k
	More frequent and clear information about gas consumption enabled by smart rr
	Better education and training of architects, engineers and workforce to provide q
	Targets for mandatory renovation in specific sectors, e.g. public buildings, social
	Energy saving obligation schemes
	Obligation to go beyond a certain energy performance standard before renting, ;
✓	Financial mechanisms (access to finance and incentives), including schemes dir to the person renting the building
<b>✓</b>	Promoting one-stop-shops, reducing administrative burden and delays and other journey", including prefabricating energy efficiency solutions
	Giving households right to a free, independent energy audits (e.g. paid by autho fuel suppliers)
	Carbon pricing
<b>✓</b>	Aggregating smaller projects to make the investment more attractive
<b>✓</b>	Working with building portfolio owners in order to shift to climate neutral/low emi-
<b>✓</b>	Promoting the use of Energy Performance Contracts and Energy Service Compa
	Public sector leading by example (e.g. renting or buying climate neutral/low emisbuildings)

EUSurvey Survey Page 10 of 14

<ul> <li>□ Encourage better urban planning, for the construction of sustainable build and promote green infrastructure (e.g. green roofs or green walls)</li> <li>□ For rented buildings/apartments, finding new ways to share the costs and</li> <li>☑ Encourage construction sector to apply circular approaches, in particular span, apply material efficiency, use low carbon materials and maximise response.</li> </ul>	l benefi design
5.6.4 Barriers to renovations	
In your view, what are the main barriers for renovating buildings more frequently  ✓ Multiple options possible.  ✓ Split incentives (different interests of owners and tenants)  ✓ Long pay-back periods	y and r
<ul> <li>□ Lack of technologies</li> <li>□ Lack of skills in the construction/renovation sector and lack of available w</li> <li>☑ Limited offer for packaged and easy to install integrated solutions by local</li> <li>□ Households' inability or unwillingness to pay for energy audits</li> <li>□ Lack of information/low awareness amongst consumers</li> </ul>	
<ul> <li>□ Lack of access to suitable financing solutions</li> <li>□ Discomfort and trouble related to the works</li> <li>☑ Too complex administrative procedures (permits required, high number of</li> <li>□ Possible negative impact on the building aspect</li> <li>□ Lack of trust in the new technologies and the solutions currently proposed</li> </ul>	
5.7 Energy infrastructure and sector integration	
Decarbonisation is leading to an increased focus on the construction of electricity smart grids and local grids to handle increased decentralised electricity product increasingly be on future proofing of gas infrastructure to allow carbon-neutral grids.	tion. Si
<ul> <li>What do you think should be the priorities for the EU's infrastructure planning in Multiple choices are possible.</li> <li>☐ As long as natural gas demand is strong, the EU should allow public supposed.</li> <li>☑ Strike a balance between electricity and gas infrastructure. Electricity can be needed, but will have to be decarbonised. Part of the electricity product through power-to-gas technologies and transported to demand centres.</li> <li>☑ Put the focus on electricity transmission and smart grids. With the expansion of energy demand, the priority is to expand the electricity potyers.</li> </ul>	port for not covetion ca
of energy demand, the priority is to expand the electricity network, notably	y to reav

EUSurvey Survey Page 11 of 14

 □ Natural gas is a fossil fuel and does not contribute to the decarbonisation of the new gas infrastructure has a lock-in effect that will lead to continued consumptio decarbonisation of gas remains a distant perspective.

#### 5.8 Enabling conditions and polices for industrial transformation

Many industrial players have in their recent industrial roadmaps committed to achievin 2050, though they point out that there are specific enabling conditions, next to a sufficient Trading System, that need to be met for them to be able to do so.

Please rate the enabling conditions for the reduction of greenhouse gas emissions in i Rating from 5 (very important) to 1 (little important). Not all options need to be rated.

Progressive decarbonisation of energy supply and of industrial feedstock

Competitive clean energy prices and feedstocks.

Markets for zero- and low-carbon products via policy intervention (e.g. labelling, | standards, guarantees of origin)

EU legal and financing framework for infrastructure, networks and grids

Reduced administrative burdens e.g. faster access to construction and environm

Addressing public perception of some technologies, such as carbon capture and carbon capture and use (CCU)

Develop an EU methodology to certify carbon dioxide removal credits at the leve different types of carbon dioxide removals in energy and industry, including use a CCS/mineralisation, air capture with CCS/mineralisation.

More circular economy, ensuring we re-use and recycle more products and mate choose products with smaller environmental and carbon footprint, reduce waste abusiness concepts for EU industry

Making mandatory the implementation of the recommendations in the energy au-

Offer SMEs the right to free energy audits or similar support

<

Border adjustment mechanism allowing EU industries to decarbonise without risl leakage", i.e. production shift to countries with less strict climate regulation

Enhanced focus on joint solutions by the social partners contributing to the achie neutrality and to address just transition within the sector

EUSurvey Survey Page 12 of 14

Support instruments providing stable incentives and increased investment certain carbon contracts for difference Increased coherence of price signals (including taxes, levies, carbon prices) for i clean energy technologies Stronger EU Emissions Trading System price signal Support measures that would allow closing the financing gap for the demonstrati deployment of innovative low-carbon technologies or products, and seamless co other EU funding instruments, such as a strengthened Innovation Fund Secure supply of sustainable raw materials needed for clean technology value cl 5.9 Waste management The EU has a comprehensive legislation for waste management in place. In your view, which waste policies would play the most important role to reduce greenly at most 3 choice(s) ✓ Introduce further waste recycling targets for instance related to construction and ✓ Introduce overall waste prevention target ✓ Introduce a target to reduce EU food waste ☐ Introduce a target to ensure a certain amount of our food and animal waste is co ☐ Introduce legislation focussed on reducing greenhouse gas emissions from wast sludge) ☐ Prohibit landfilling of waste that can be treated differently and limit as much as p increasing recycling ☐ Harmonise the treatment of waste incinerators under climate legislation **Previous** Next

6 EU policies and outreach towards third countries on climate change

The threat of climate change requires a decisive and sustained response fro emitters. However, the aggregate effect of national climate plans is currently stay below 2°C of global warming, let alone 1.5°C. The EU's share of global decreasing.

By the virtue of decades of climate policy implementation, the EU has develoned in design and development of regulations, incentives, and evidence based a carbon economy. As the rest of the world advances with the implementation targets, the "EU model" of decoupling economic growth from the growth of good particular interest to our partners around the world. The EU should work depromote the uptake of ambition at global level, as foreseen in the Green Des

EUSurvey Survey Page 2 of 5

At their December 2019 meeting, EU Heads of States and Governments also update to the EU nationally determined contribution (NDC) under the Paris A Climate Change Conference in Glasgow in November 2020.

Next to that, the EU is also engaging more actively with partner countries to reflect the highest possible ambition considering national circumstances. So most vulnerable countries to deal with the consequences of climate change.

In order to lead international negotiations, the EU will need to develop a stroconvincing and supporting others to take on their share of promoting more st the EU will use its diplomatic and financial tools to ensure that green alliance countries and regions, considering also the international security implications

#### 6.1 Priorities for climate diplomacy

Where do you think the EU should concentrate its climate diplomacy and cooperation 

Multiple options possible.

- Western Balkans, Eastern Europe and Central Asia
- ✓ Middle-East and North Africa
- ✓ Sub-Saharan Africa
- ✓ North-Atlantic region including the USA
- ✓ Latin America and Caribbean including Brazil
- ✓ South Asia including India
- East Asia including China
- ✓ South East Asia
- ✓ Australia, New Zealand and the Pacific Region
- **G20/G7**

<

Are there other key aspects which you did not find reflected in the questions and you value 1000 character(s) maximum

Nederland steunt een ophoging van het EU 2030 broeikasgasreductiedoel naar 55 wil idealiter eind 2020 hierover overeenstemming bereiken zodat de EU een ambiti NDC kan indienen bij de VN. Om een kosteneffectieve aanpak van de transitie cen stellen is Nederland voorstander van het sturen op centrale hoofddoelen, zoals CC reductie in de klimaat- en energietransitie. Subdoelen die worden vastgesteld om hoofddoel te bereiken kunnen belangrijk zijn, maar moeten niet in de weg staan va kosteneffectieve benadering, waarbij zoveel mogelijk gestuurd wordt op één centra hoofddoel. Nederland zal in de uitwerking nadruk leggen op kosteneffectiviteit en voldoende maatschappelijk draagvlak. Nederland ziet de voorstellen voor herzienir Europese instrumenten als logisch gevolg van de ophoging van de Europese doele Hierbij zal Nederland letten op onderlinge samenhang en uitvoerbaarheid. De nadr wat Nederland betreft bij het aanscherpen van het ETS en bronbeleid
